a
Primary access × history interaction
Pointwise 95% paired percentile intervals
2013 calibration (n = 16)
2014 confirmation (n = 32)
−6
−4

4
Normalized endpoint MAE difference (×10−3)
b
Four fine-history access diagnostics
95% simultaneous intervals within each phase (maxT)
2013 calibration
2014 confirmation
Maximum − mean/magnitude
Magnitude − signed detail
Signed detail − direct
BlurPool style − maximum
